Professional Summary

Final-year BE Information Technology student with hands-on experience developing Flutter applications and testing application workflows. Experienced in debugging, validating features, identifying defects, and improving application quality throughout the development lifecycle. Interested in opportunities across Flutter Development and Software Testing/QA.

Education

B.E Information Technology | Saraswati College of Engineering (Mumbai University)

SGPA: 8.64 (Sem 7) | Expected 2026

Skills

- Languages: Dart, Python, SQL
- Mobile Development: Flutter, REST APIs, SQLite, Supabase
- Software Testing: Manual Testing, Functional Testing, Regression Testing, Mobile Application Testing, Bug Reporting, SDLC & STLC
- Tools: Git, GitHub
- Other: UI/UX Basics

Internships

- Flutter App Development Intern – Uptoskills (July 2025 – October 2025)
Improved Flutter app UI/UX, tested application features, and implemented Supabase-based authentication and database integration in a collaborative team environment.

Projects

- **Adaptive AI For Neurodivergent Learning** – Flutter, Supabase (Major Project)
Built an AI-powered learning platform designed for neurodivergent users with offline-first cloud synchronization. Implemented gaze tracking, flashcard generation, text summarization, and dyslexia-friendly accessibility features.
- **Wallet Watch** – Flutter, SQLite, Supabase
Developed and tested an offline-first expense tracking application. Validated budget calculations, authentication flows, data synchronization, and export functionality while identifying and resolving application defects.
- **Block Pass** – Flutter, Blockchain, Supabase
Developed a blockchain-based event pass management system with secure QR-code generation and verification. Integrated Supabase authentication and storage to enable secure event registration and pass validation.
- **IoT Weather App** – Flutter, Arduino, Supabase
Created an IoT-based weather monitoring solution using Arduino sensors and a Flutter mobile application. Enabled real-time visualization of temperature, humidity, and air-quality data through Supabase integration.
